JAK

napisać Personal Statement

O CZYM PISAĆ?

Opisz dlaczego chcesz studiować dany kierunek, jaką jesteś osobą, jakie masz pasje, plany na przyszłość, czy angażowałeś/aś się w jakieś organizacje, kółka, kluby, konkursy, wolontariaty w szkole i poza nią etc. Jeśli aplikujesz na kilka kierunków/uczelni staraj się ująć to ogólnie, ponieważ możesz wysłać **tylko jedną wersję Personal Statement!**

Informacje które muszą być zawarte w poszczególnych paragrafach

Introduction

The introduction needs to capture the reader's attention immediately, particularly since admissions officers will spend no more than 2-3 minutes reading each statement. I feel that the introduction I have constructed from your original one does just the trick. It also briefly touches upon the main points raised in the body paragraph.

Body paragraphs

The first body paragraph serves as an extension of the introduction and should go into your academic background. I offer suggestions above about how you can approach this paragraph and demonstrate that you are prepared for the challenges of university study. The following paragraph is also important in that it should show that you know what a profession in the field entails. Again I offer you some suggestions on how you can improve this paragraph. The third and final paragraph goes into your extracurricular activities and interests demonstrating that you can contribute to university life more than just academically. Just make sure that each thing you write about relates back to your studies by outlining the different skills you have attained.

Conclusion

The final paragraph provides closure and briefly summarises the main points in the body paragraphs. I really didn't have to do much here as it was a very solid conclusion.

Paragraf I: Wprowadzenie

Dlaczego chcesz studiować taki kierunek? Wstęp

EXAMPLE 1

It was my father, the founder of the first forex brokeragehouse in Poland, who planted in me the seed of attraction to the complex world of finance. I see Mathematics and Economics not as merely academic disciplines but rather foundations of the current economy largely influenced by the financial domain. My ambition is to pursue Mathematics and Economics as a degree and become an innovator in the field I am fascinated with. I am certain I possess the necessary academic preparation as well as personal attitude to excel as a student and a professional.

EXAMPLE 2

It was 25 December 1998 when I found my first microscope under the Christmas tree. Even though I was only five at that time I spent hours watching leaves and insects, experiencing first moments of fascination with Biology guided by my father. Unfortunately, a few years later he was diagnosed with multiple sclerosis, and I had to leave school and assist him in the USA during his medical treatment. Watching doctors at work and being captivated by how their knowledge helps save people's lives I decided to combine my passion for Biology and Science with my desire to help others and pursue a degree in Biomedical Science.

EXAMPLE 3

What makes India so intriguing is that one cannot really talk about its philosophy, religion or language in singular forms. This enormous country is a melting pot of beliefs and cultures, the understanding of which is crucial for the Westerners in order to collaborate on the brighter future of our global community. I agree with Will Durrant, who wrote: "India was the motherland of our race, and Sanskrit the mother of Europe's languages"; I wish to study the history, culture and languages of the region at the university level, gain insights into its current reality and contribute to future prosperity based on mutual awareness and appreciation.

Paragraf II: Akademickie osiągnięcia i umiejętności

EXAMPLE 1

With a clear goal in mind and recognition of challenges that the university education presents, I joined a class with an extended curriculum of Biology, Physics and Chemistry with the aim of strengthening my academic abilities. I studied the principles of Science and learned how to use complicated laboratory equipment. Biology and Chemistry require an analytical approach to learning, while Mathematics and Physics helped me develop the logical problem solving skills, which are greatly required in any healthcare profession. Thanks to my multiple successes at regional Chemistry and Biology Competitions I was accepted to attend tutorials at University of Lodz, where we studied Electrophoresis and principles of DNA isolation. However, standard courses never completely fulfilled my curiosity for Biology and its application to medical sciences. Inspired by my father's everyday fight with his disease and by reading the book "Multiple Sclerosis", written by his neurologist Krzysztof Selmaj, I began to explore the human neurological system as the main point of focus in my studies.

EXAMPLE 2

In high school I decided to focus my interests on History and Civic Studies. I found myself under great impression of the 19th century in the context of enormous progress since the Industrial Revolution. As Robert E. Lucas, Jr. said: "for the first time [...] the living standards of the masses [...] have begun to undergo sustained growth". It showed me how personal happiness depends on the socio-economical and political systems. This led me to further studies on political ideologies, especially liberalism and Christian democracy, represented by my most valued politician and a supporter of the united Europe, Robert Schuman. I also acknowledge the opponents criticize political jurisdiction of the EU due to the limited freedom of nations. Having read George Orwell's "1984" I recognize the importance of personal freedom, which I aim to promote through political and historical education.

Paragraf III: Doświadczenie i inne

EXAMPLE 1

In the course of my secondary education I became a laureate of the VI European Youth Parliament (EYP) and, consequently, won a long-term internship at the parliamentary office of a Polish Member of European Parliament. Given the responsibility of organising and leading the next two editions, I approached distinct issues ranging from economic crisis through pan-European energy system to intellectual property law. As a president of the EYP, I had an opportunity to express my opinions publicly, perform in a multi-party environment as well as conduct negotiations. Thus, I embraced divergent point of views and gained intercultural awareness. Moreover, my visit in the European Union's institutions in Brussels allowed me to learn both the practical and theoretical side of devising and enforcing law. In addition, my summer internship at the law firm "Lex Signum" let me accompany lawyers during their meeting with clients and participate actively in preparing some attainable solutions. This showed me how lawyers were able to juggle legal concepts when searching for solutions as well as exposed to the necessity of controlling emotions when working at tough cases. At the same time, I attended moot courts and trials organised at the University of Lodz by the Law Students' Association. This experience excited me and let me see myself in this setting in the future

Paragraf IV: Twoje plany na przyszłość lub zajęcia poza szkolne.

EXAMPLE 1

On top of my studies, I pursue other interests, which have shaped my creativity and improved skills valuable in the academic environment. I regularly sing at the afternoon Music School and attended short courses in fashion at St. Martin's College in London. Combining classes at different schools required assessing the relative importance and urgency of tasks as well as coping with strict deadlines.

EXAMPLE 2

Outside of the classroom setting, I have undertaken various activities that contribute to my practical knowledge of the subject. Encouraged by teachers I established a Biology Society and as a president run projects aimed at investigating the autoimmune processes of patients with Multiple Sclerosis. We eagerly read magazines such as Scientific American or Science World and transmitted the most interesting news and innovations in the school media.

Paragraf IV: Podsumowanie.

EXAMPLE 1

Seeing ethnic diversity as a global value is an accomplishment of the recent decades. Much has been done, but the world still needs action and educated individuals to preserve its cultural heritage and work for a future based on respect and understanding. The unique and diversified set of skills required to pursue a degree in Oriental and South Asian Studies is what makes it so appealing and challenging to me. I believe I possess the necessary linguistic and academic abilities as well as personal attributes which will allow me to excel as a student and strive in my future career.

EXAMPLE 2

This year I have been offered a place at the University of Warsaw's Law School, but I know that being a lawyer requires more than a mere knowledge of literal rules, I decided to take a gap year. I expect this time will provide me with a deeper comprehension of my future career through both: my current internship at the Marshal Office of the Lodz Region and my volunteering plans for the next year.

Pytania pomocnicze

Who are you as a person?

What are your successes and achievements?

Why do you want to study the subject?

What previous experience in the field you are going to study have you got?

What are the aims of your studies at the moment? (These of course can change.)

What are your interests?

How do they relate to the subject you would like to study?

What are your skills and how have you developed these?

How can you demonstrate these abilities? (Here you may include any extra-curricular school activities and clubs outside of school as well as work experience.)

Podstawowe wymogi redakcyjne:

min. 300 słów (ok. 1 strona a4)

max. 4000 znaków ze spacjami

max. 47 linijek
